

Processing service Industry solutions

Your partner Bückmann

Bückmann is an owner-managed company in the field of screening and separation technology.

The material processing service area has been in existence for over 20 years.

Construction of a new production hall now allows us to assist you still more quickly and flexibly.

Processing service

Contracting out jobs is a matter of trust. That is why we offer you as much transparency as possible: audits, customer visits or the acceptance of specifications.

Naturally, we are certified according to DIN EN ISO 9001 and take it very seriously.

Options for material preparation at Bückmann:

Grinding:	Various grinding systems for comminution to many grain size ranges without being hard on the product
Screening:	Screening machines for various throughput volumes and sizes
Homogenisation/mixing:	Conical screw mixer, biconical mixer
Packing from and into:	Big Bags, sacks, barrels, drums via filling systems

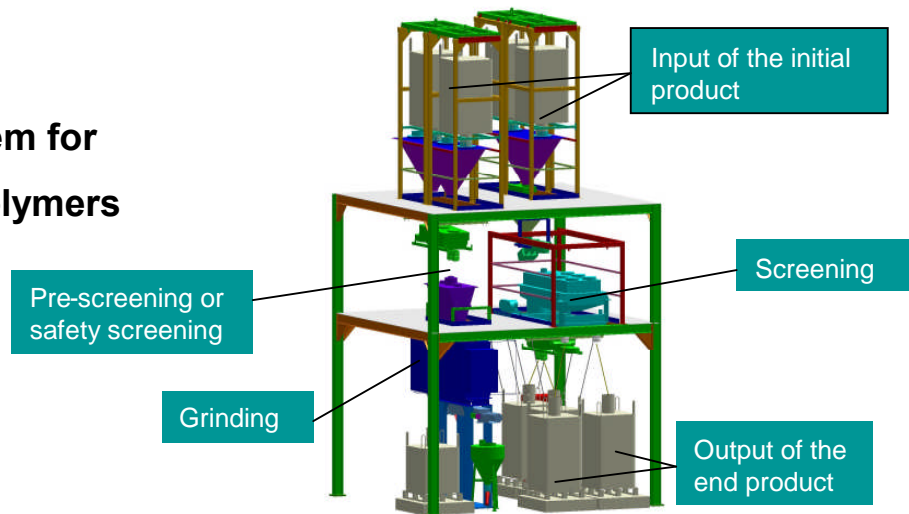

**Dedication of the new
production hall**

OUR KNOW-HOW:

- Over 20 years of experience in job contract material preparation
- Support by process engineers
- Specialist in the area of screening and comminution
- System support by trained personnel

As example:

Production system for processing of polymers

Mixing (homogenisation)

A high mixing quality can be achieved because we adapt our systems to the specific order. Not only are large batches homogenised, additives for product refinement and finishing can also be added to intermediate products.

Comminution (grinding)

Our systems grind down to the finest size range. We achieve an optimal result in terms of yield and comminution level by individually adapting the grinding tools and machine speed to the requirements. Our systems include an explosion-proof system for up to 1.5 bar.

Screening

We screen your material in screening machines that can be configured for various throughput volumes and sizes. Our experience ranges from numerous products from the chemical industry to mineral products and screening of basic food products.

Filling and packing

The goods to be processed can be delivered to us or shipped out in a number of transport containers, such as big bags, barrels, sacks, etc. The filling systems contain integrated scale systems. Even for smaller drums and barrels, we have the ability to implement filling and transfer procedures. We would be happy to organise shipment directly to your customer on your behalf.
