## System solutions from one source

## Screen and separation technology

**bückmann®**

BÜCKMANN, an owner-managed company, has been successfully doing business in the fields of screen and separation technology for more than 25 years based on their long-standing experience in processing of bulk materials.

Based on the divisions screen tensioning service, fabric technology and processing service, BÜCKMANN is an all-round partner for customers from the bulk material industry.

As a matter of course, BÜCKMANN has established a certified quality management system according to DIN ISO 9001.

The main production facility is headquartered in Mönchengladbach. The subsidiary BÜCKMANN Benelux in Overijse near Brussels ensures an optimal service to the markets in Belgium, The Netherlands, and France.

## Screen tensioning service

Optimal performance of a screening machine requires a well-tensioned screen frame. Based on its long-standing experience in screen technology, BÜCKMANN supplies high-quality screen frames equipped with individually selected screen fabrics.

Besides complete, newly manufactured screen frames according to customer's specifications, BÜCKMANN also offers re-tensioning. The comprehensive range of services includes overhauling of defective screens and delivery to the customer on schedule in near mint condition.

Various screen frames and diverse accessories all around the screening machine can be delivered from stock. A well assorted range of screen fabrics made of metal, synthetic materials, and natural silk enables BÜCKMANN to ensure even short-term delivery according to customer's requirements.

BÜCKMANN services are not only limited to delivering the screen frame. Personal on-site consulting or screening tests in the BÜCKMANN Technical Centre assist the customer in finding the appropriate solution.

Thanks to a competence network having been established over many years BÜCKMANN is able to deliver the required spare and wear parts for many screening machines. According to prior agreement BÜCKMANN will take over the installation of spare and wear parts or the maintenance of the screening machine in regular intervals at customer's premises.

## Processing service

BÜCKMANN offers a versatile range of services all around the processing of bulk materials. Both one-off orders and long-term execution of complete process steps are possible. Particularly for customers from the fine and specialty chemicals industry, BÜCKMANN processing service is a true alternative to own production. Product-specific equipment is available for screening, sifting, grinding, mixing, compacting and filling.

It is an important prerequisite for successful cooperation that BÜCKMANN clearly understands the requirements of the customer regarding the processing of his goods. The product specification is realised by experienced staff supported by engineers. A transparent production flow and auditing by the customer go without saying at BÜCKMANN.

Besides technical know-how, factors like cleanliness, adherence to schedule, and confidentiality are indispensable for achieving customer satisfaction. The range of services offered by BÜCKMANN also includes logistics management, stock keeping and delivery of samples.

## Fabric technology

High-quality fabrics are the basis for a successful process in many screening and filtration applications. BÜCKMANN operates a well-assorted warehouse for screening and filter fabrics made of different metal alloys, synthetic materials, and natural silk.

Long-standing experience in processing of fabrics enables BÜCKMANN to produce screening and filter elements in own manufacture according to customer's requirements. Through true-to-size manufacturing, also in small batches, BÜCKMANN is able to meet all customer demands.

The fields of application for the parts produced here have long since not been limited to screening and filtration inserts. The products are increasingly used also in business sectors like automotive industry, generation of renewable energies, or medical technology.

A network of specialists in fabric production and processing allows finding the optimal solution for the customer. Often BÜCKMANN is involved in the projects from the very beginning and accompanies them to series production.

Besides fabrics, BÜCKMANN also offers solutions made of wire mesh, expanded metals, extruded wire mesh or parts shaped by etching.
